Long story short: The README file that is included with the iso gets copied over to the mirror as README.TXT. The torrent was created with just a README file in place, so the webseed generated by the rsync process doesn't work with the torrent file as is.

I've created a new torrent file and magnet link.

<https://freeslack.space/stuff/freeslack64-14.2-iso.torrent>

magnet link:

<magnet:?xt=urn:btih:87e55a435a81992e69892792ef476159b70d331f&dn=freeslack64-14.2-iso&tr=udp%3a%2f%2ftracker.coppersurfer.tk%3a6969%2fannounce&ws=https%3a%2f%2fmirror.freeslack.space%2ffxp-iso%2ffreeslack64-14.2-iso%2f>

The old magnet/torrent still works, and still serves up the same content, so no worries there. It's just that this one works better with the webseed. Same content, better service. What's not to like?
