What about the name = "Gnusiance"

I had been working on my own free spin but always a set back here & a set back there.  
My thoughts where also ways only one DM and only desktop apps and services included.  
As a member of the Free Software Fountain and long-time Slackware user, this is always a challenge.

Just my two cents, I would be happy to trans ownership of the domain name.

FYI: the name Gnusiance was originally used by the gNewsence project then they changed their name.
